Applicant S.A. NANOCYL							
1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.							
2. This REPORT consists of a total of	sheets, in	cluding this cover sheet.					
3. This report is also accompanied by A	NNEXES, comprising:						
a. (sent to the applicant and	I to the International Bureau) a total of $\underline{}$	sheets, as follows:					
sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).							
sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.							
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s))							
related thereto, in compute	r readable form only as indicated in the	, containing a sequence listing and/or tables  Supplemental Box Relating to Sequence Listing (see					
Section 802 of the Adminis							
4. This report contains indications relat	ing to the following items:

#### Cited documents:

D1: ALEXANDRE, MICHAEL ET AL: "Use of metallocenes in the polymerization-filling technique with production of polyolefin-based composites" MACROMOLECULAR RAPID COMMUNICATIONS (2000), 21 (13), 931-936, 2000, XP002282544

D2: US 2003/119920 A1

D3: PATENT ABSTRACTS OF JAPAN vol. 2000, no. 06, 22 September 2000 (2000-09-22) & JP 2000 086217 A

D4: WO 02/076888 A

The subject matter of claims 1-34 appears to meet the requirements of novelty and inventive step.

Document D1 is considered the closest prior art. Said document describes a method for the deposition of metallocenes as catalysts and of methylaluminoxane as a co-catalyst on polymer filler materials. The modified fillers are capable of dispersing far more easily, and a higher level of filling can be obtained.

The method described in D1 differs from the subject matter of claims 1-23 in that D1 describes a plurality of different substances to be used as possible fillers, such as kaolin and graphite, but not carbon nanotubes. The

PCT/BE2004/000113

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

substances used as fillers in D1 have different physical properties from those of carbon nanotubes.

The composite materials obtained according to claims 1 - 23 have improved mechanical properties, thermal stability and fire behaviour. These technical effects for carbon nanotubes are not foreseeable in the light of D1.

Document D2 describes carbon nanotubes formed on a largepore support. A catalyst composition is deposited on the
carbon nanotubes. No co-catalyst is disclosed. This
catalyst system can be used in different types
of chemical reactions such as polymerisation. The
technical effects obtained with the method according to
the present application are not foreseeable in the light
of D2.

Document D3 describes a catalyst including carbon nanotubes, molybdenum and an inorganic support. Said catalyst is used to produce nanotubes.

Document D4 describes the use of carbon nanotubes as a filler in polymeric matrices. D4 does not describe catalysts including carbon nanotubes.

These improvements were not foreseeable in the light of the cited documents and therefore an inventive step is recognised.
